

SEEDER

Seeding with variable placement, metering accuracy and changeable speed is made easy with our patented Seeder.

- Single pass seedbed preparation while seeding with AERA-vator and MULTI-tine shafts.
- Ability to overseed and primary seed with same machine.
- Two-in-one patented feed wheels for metering both large and small seed varieties. This allows accurate calibration with both large and small seed sizes without adding a separate small seedbox.
- All units come with calibration catch tray to collect the seed for accurate calibration. Catch tray is secured on front of seed box when not in use.
- Accurate exposure of seed flutes are visually measured by raising the easy access wind deflector. Micro-seed calibration adjustments are made using the adjusting screw to align flute exposure.

- Feed wheels are spaced approximately 4 inches apart for uniform seed placement using 15 outlets for the UA-60 and 20 outlets for the UA-80 unit.
- Seeder optional for all models except "Tow-Behind."
