

Introducing the Pro-Flex 120R Contour Roller Mower

The **PF-120R** is the new roller version of our Pro-Flex 120 contour mower. The Pro-Flex 120 has long been regarded as the benchmark in tractor drawn contour mowers. The new **PF-120R** takes the utility and dependability of the PF-120 one step further with new features like:

- **Pro Lift-N-Turn system is standard:**
 - Allows decks to be lifted off the ground hydraulically while PTO is engaged
 - Eliminates scuffing on sharp turns and allows operator to line up mower for striping applications.
- **New easy change height adjustment:**
 - Allows operator to change cutting height in minutes without the need of tools.
 - Mower transitions quickly for multiple mowing height applications.
- **Dual Purpose – fairways and roughs:**
 - With the ability to cut as low as ½” and the contour following capabilities of the standard Pro-Flex, the Pro-Flex 120R can now do double duty as a fairway mower along with being a premium striping mower for your roughs.
- **Full width rollers on front and rear of each deck:**
 - 3” full width rollers are mounted on vibration dampening rubber bushings
 - Three point deck mounting system ensures rollers maintain full width contact with the turf

The **PF-120R** was introduced at the recent GIE show in Orlando. Golf superintendents from around the globe were very impressed with the **PF-120R**, which now provides them with a viable, less costly alternative to their current, expensive self-contained mowers.
